

Your Order

Thank you for choosing Fleetwood! This information is intended to assist owners, builders, and architects with the ordering process.

Certified Proposal:

Authorized Dealers are required to furnish all quotes in our **Certified Proposal** format (noted at the top of the quote header). If the Certified Proposal was not furnished, the pricing is not authenticated by Fleetwood. Dealers are only required to furnish product series and the grand total in order to protect their window/door take-off.

Certified Proposal Example (attached)

Samples:

Many customers want to see samples of certain parts and pieces. These can take anywhere from a few days to a few months depending on the request.

Drawings:

“Shop drawings” are not needed to manufacture the order. Dealers transfer the digital order in to the factory. If drawings are desired, Fleetwood can create them as a service to our dealers and associates. If drawings are needed sooner, CAD files are available at no charge for others to use.

Custom Finishes:

Custom finish orders require approval of a color sample before the order can be processed. Obtaining the color sample should begin at least 4 weeks before placing the order, or it will add an additional 3-4 weeks to the delivery time.

Builders should account for possible QC issues during fabrication. If key extrusions have to be replaced, it can add an additional 4-6 weeks to shipment.

Custom Options:

Customization requires more fabrication time. Ask our dealer for ways to reduce production time before the order is placed.

Is My Order in Process?

To be certain your order is in process, ask your dealer for a copy of the Confirmed Order, which will state the estimated shipping schedule. Further, you can verify the stated shipping date range has not changed since you received a copy of the Confirmed Order (see Accounting below).

Accounting:

Most orders require a deposit before it is released to the factory. Ask your dealer for written confirmation from the factory that the order is in the Work Order/Production stage. Fleetwood may accept a joint check to further secure the deposit.

Change Orders:

Once the order has been released to the factory, changes to any line item(s) require that the entire order be stopped. The original ship date will NOT be met and a new date will be assigned that is at minimum one week further out.

Faster?

The automated ship date is firm but requests for an earlier date must be made before the order is placed. Once released to the factory, any changes will delay delivery.

Production Issues:

Mistakes can occur in the factory. Early ordering is recommended on time sensitive projects.

QC Rejections:

Fleetwood sources component products from the highest quality manufacturers available. However, what is received is not always up to our QC standards. When this happens, scheduled ship dates must be delayed until we receive the quality parts we demand. Placing orders early can help mitigate the pain caused by delays.

Delivery:

Fleetwood will deliver your order to our dealer's showroom unless otherwise noted on the order. Shipping to the project site can save valuable time and reduce the risk of handling damage. Our products are packaged for protection but each item should be carefully inspected within 48 hours.

Installation:

It is common for changes to be made to the scope after the installer is brought into the discussion. Coordinate installation early to avoid delays in placing the order and/or change orders.

We encourage you to get involved in each of these areas. Additionally, get a copy of the quote early in the process so you are aware of what is being ordered and how it will be shipped. Fleetwood's Inside Sales department is available to verify order status and scheduled ship date. Please be ready to provide a 6-digit Fleetwood order number.
