POCKET AND POCKET INTERLOCKERS

POCKET AND POCKET INTERLOCKERS WITH STANDARD 3-1/2" SIGHTLINE EXTENDER

## DESIGN NOTES

- Barefoot sill (not weather rated).
- Promotes indoor/outdoor living.
- Complements the weather rated 3070-EX.

### Curved/Bent:

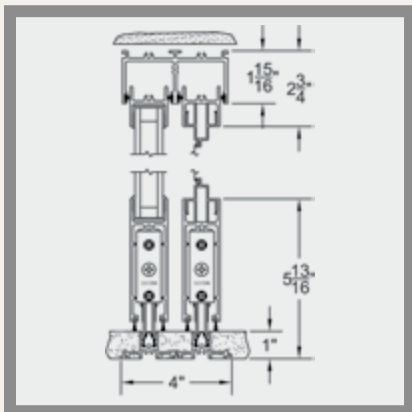

The aluminum and glass can be bent to your precise specifications (10'+ radius) and the number of panels is almost unlimited. If your project requires weather or energy performance, the Series 3070-EX is offered bent too. The image above shows the track before finished flooring.

Pinnacle Architecture (Las Vegas, NV)

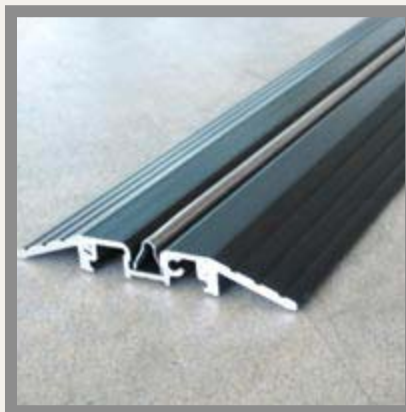

### Hidden Track System:

The main feature of this door system is its tracking system, which creates a seamless alfresco environment. The stainless track inserts into the base and is easily replaced, if ever damaged, without having to remove the flooring. The image above shows the track after finished flooring.

### Deluxe Screen:

Ours is the best sliding screen door made because we use the same extruded aluminum parts as the glass panels and it therefore has all of the glass panel's excellent features, e.g. Archetype hardware and precision bearing rollers. The detail above shows the optional 1" sill.

### ADA Compliant:

Shown herein, the Norwood 3050 comes with an optional threshold that meets the American Disabilities Act requirement of 1/2" tall. Regardless of which threshold is selected, the Norwood 3050 has a minimal starting force and operating force (less than 5 lbs. on 300 lbs. panel) and when coupled with the ADA lever (see page 37), the Norwood 3050 is the ideal sliding door for applications requiring ADA standards.

For budget driven jobs, Fleetwood offers entry level products. See page 34 for more information.
